- Demonstration Video Status: Local runtime capture recorded, verified, and compiled safely into academic portfolio documentation folders.

PROJECT DEMONSTRATION & EXTERNAL REFERENCE MEDIA

1. SYSTEM RUNTIME OVERVIEW

The operational demonstration showcases the live HeartInsight interface functioning natively within a local deployment architecture. The walkthrough records the web application running via the Spyder IDE console environment, routing connections smoothly without performance lags or visual drops.

2. DEMONSTRATION VIDEO WALKTHROUGH OUTLINE

- Part 1: Local Setup Execution (Launching app.py inside Spyder, loading libraries, establishing loopback on port 5000).

- Part 2: UI Presentation Showcase (Demonstrating the responsiveness of the custom layout, the fixed left diagnostic parameters panel, and the upper anchor navigation links).

- Part 3: Live Workspace Filtering (Demonstrating real-time clicks inside the embedded Tableau sheets to segment demographic data, lifestyle habits, and pre-existing conditions).

- Part 4: Storyboard Review (Walking sequentially through the final comprehensive story presentation to summarize conclusions).

3. PORTFOLIO DEPLOYMENT LINKAGES

- Git Source Code Repository: <https://github.com/Bhargavkamakula/Heart-Disease-Analysis>

- Interactive Visualization Profile:

<https://public.tableau.com/app/profile/kamakula.bhargav>

*Note: The complete local video capture file, alongside the finalized technical PDF documentation, has been bundled, indexed, and pushed securely to the master academic portfolio repository.
